Road work began Monday, July 15, on a mill/hot mix maintenance project one mile east of Venango. The work will continue for seven miles east to Brandon.

The maintenance work will consist of milling several areas in the westbound lane and replacing with hot mix.

The speed limit will be lowered to 45 mph until the maintenance project is completed due to uneven lanes after milling.

Travel through the mill/hot mix maintenance project will be maintained using flaggers and pilot vehicle with delays expected to be minimal.

It's anticipated the project will be finished by Friday, Aug 9.
